INDIGO'S BIOLOGICAL SEED TREATMENT

Plant for Performance and Grow with Confidence

Winter Wheat + Cover Crops

biotrinsic™ M36

biotrinsic™ M36 is a unique microbe that helps increase the nutrient availability in the root zone and assists the plant in responding to heat and drought tolerance.

FEATURES AND BENEFITS

Protects yield potential by improving:

- Nutrient use efficiency
- Heat tolerance
- Drought tolerance

“ We tested Indigo’s biological treatment on 300 acres of wheat to start. It was a night and day difference. **10 bushels an acre more** than our untreated fields. It even bumped up our variety’s protein content, which ended up netting us a 37 cent premium. Next year, guess what we did? Put that seed treatment on all our wheat, and row crop acres too. ”

- Jon Johnson, Kansas Farm and Ranch Management

HOW IT WORKS

- Increases bioavailability of phosphorous and potassium to the plant through improving nutrient conditions in the soil for root and plant growth
- Improves plant’s tolerance to heat and drought to support root growth
- Supports root mass and improves tillering by 12% on average

Test plot: Bucklin, KS

Planting Date: October 2017 Progress: May 2, 2018

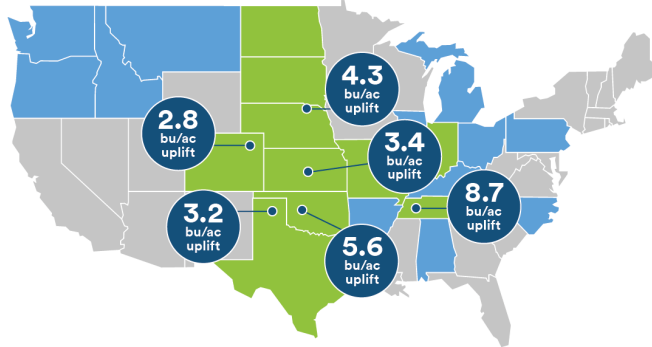

*Product performance information based on third-party field trials. Results will vary across growers and farm operations. A number of variables may affect agronomic outcomes. Winter Wheat + Cover Crops

biottrinsic™ M36

THE SCIENCE BEHIND THE DIFFERENCE

Microbiomes, or communities of microbes, help maintain internal processes for all living things – Indigo focuses on identifying microbes that have evolved in conjunction with plants over time to optimize their health and maximize their productivity.

At Indigo, we identify which of these microbes are most beneficial to a plant’s health through the application of algorithms and machine learning. We further prove their performance at our research laboratories and greenhouses in Boston, Massachusetts and Research Triangle Park, North Carolina along with extensive field trials throughout the United States. Our resulting seed treatment products complement a plant’s natural process to improve health and development across each phase of life, while boosting crop yields.

WHAT MAKES BIOTRINSLIC™ DIFFERENT

More Beneficial for Your Crop

Microbes are selected to address the key stresses that limit crop yield potential. This allows you to select the right biottrinsic™ products based on the stresses that have the greatest impact on your farm.

From Plants for Plants

biottrinsic™ is a collection of over 30,000 all naturally occurring microbes that have been extracted from plants thriving in stressful conditions. We isolate microbes that are abundant in plants that are thriving under stress while other plants around them are not. This allows us to tailor our products to a specific crop and set of stresses.
