Instructions for Use Winter Wheat Co-Pack

Slurry Preparation for biotrinsic™ W10 WP and biotrinsic™ X12 WD

Units of Wheat to treat	biotrinsic™ W10 WP	biotrinsic™ X12 WD	Slurry Application Rate for Wheat
200 units *Assume 1 unit of wheat is 50 lbs	0.41 lbs (one package)	1.0 gal (one container)	1.23 fl oz/CWT or 0.62 fl oz/unit

- » biotrinsic™ W10 WP can be combined in a mix tank to make a slurry with biotrinsic™ X12 WD. The slurry can be applied directly onto wheat using standard seed treatment equipment.
- » Add the biotrinsic™ X12 WD liquid to the mix tank first. Then slowly add the biotrinsic™ W10 WP powder with sufficient mixing to disperse the powder in the liquid.

- » Allow for five minutes of mixing to ensure the product is well dispersed in the mix tank before starting seed treatment.

- » Agitation must be maintained in the mix tank during seed treatment to limit settling of the product.

- » The slurry must be used within 8 hours after mixing.
